

Section 4.12 – Slip Sheet Guidelines

Slip-Sheet Guidelines – (R)

If you will be inserting slip-sheets, use quality sheets made of corrugated paper or plastic, which can be pushed or pulled without damage.

- Slip-sheets must have 4” flaps on two (2) adjacent sides.
- Merchandise must be stacked on slip-sheets with no overhang. This allows the product to be moved to a 48"x40" pallet with no overhang. Stack merchandise by item to no more than 47". This allows 5" for pallet height.
- Separate different item layers with slip-sheets. Merchandise and slip-sheets must be loaded with the 4” flaps facing the rear of the trailer.
